Horizontal black-out systems

Der SonnenLichtManager

The horizontal black-out blind is a horizontal, internal sun shading system under a skylight opening which, when closed, prevents light from entering and reliably darkens the room. Elegantly equip windows that are difficult to reach.

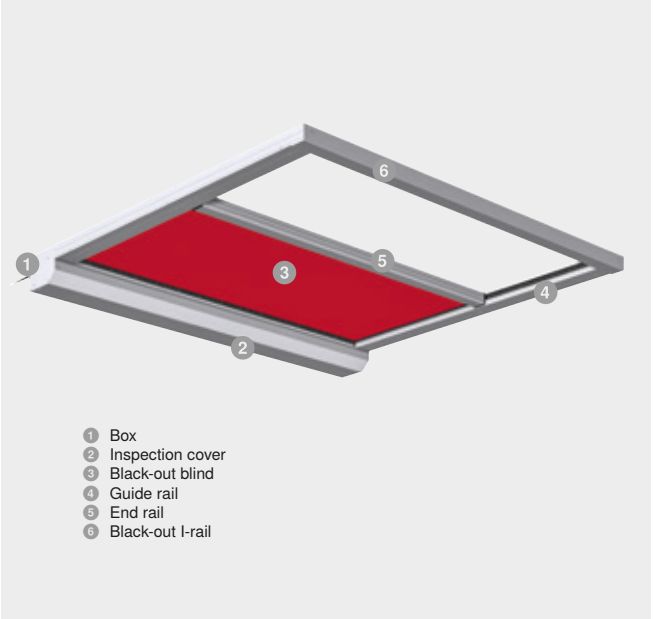

Features

Max. width	3,000 mm
Max. height	4,000 mm
Operation*	Motor
Guidance*	Guide rails
Fields of application	Complete blacking out of horizontal areas e.g. skylight domes
Fabric qualities	Textile fabric, optional glass fibre curtain

*depending on type

The benefits for you

- Restrict the incidence of light on horizontal windows or skylight domes as required: easy operation via a motor drive when the product is at a height that cannot be reached.
- Flame retardant materials or non-flammable fabric facilitate fire protection (DIN 4102-1).
- High-grade appearance: when extended, high-quality designs shape the room. The fabric winds up inside the cassette and is not visible when extended.

Printing errors, changes and deviations from the technical specifications and product presentations are possible due to the individual structural conditions. 2043287/05.2021_EN.Int
