## GREENFIELDS XTRAGRASS

COMBINES NATURAL AND ARTIFICIAL GRASS  
FOR THE BEST OF BOTH WORLDS

### Key benefits:

- Synthetic reinforcement of natural grass for three times more playing hours
- Increased surface stability due to enhanced artificial coverage
- Partly bio-degradable backing for a smooth consistent surface 'lay and play' solution when used in sods
- 100% recyclable – backing and fibres part of the same polymer family

GreenFields XtraGrass unites the positive properties of natural grass with the strength and durability of artificial turf, providing an elite playing surface for sports with a year-round green appearance. Players can train on the pitch where they play matches, giving them an increased advantage; plus, there is a reduced risk of injury from a consistently stable surface.

The synthetic turf fibres are woven into a partially biodegradable backing which creates a resistant structure to reinforce the pitch. The XtraGrass is filled with 4cm of dried rootzone where the grass is sown. In about two months' time the biodegradable fibres will be degraded creating an open matrix to allow the grass to root deep. Due to the open woven structure, normal maintenance like aeration won't damage the stability of XtraGrass. XtraGrass can also be used as a 'lay and play' system when used for sod farming or at a venues nursery.

XtraGrass is ideal for clubs and venues where artificial grass is not possible or where there is a strong preference for natural grass. XtraGrass will improve the performance and durability of the surface offering three times more playing hours.
