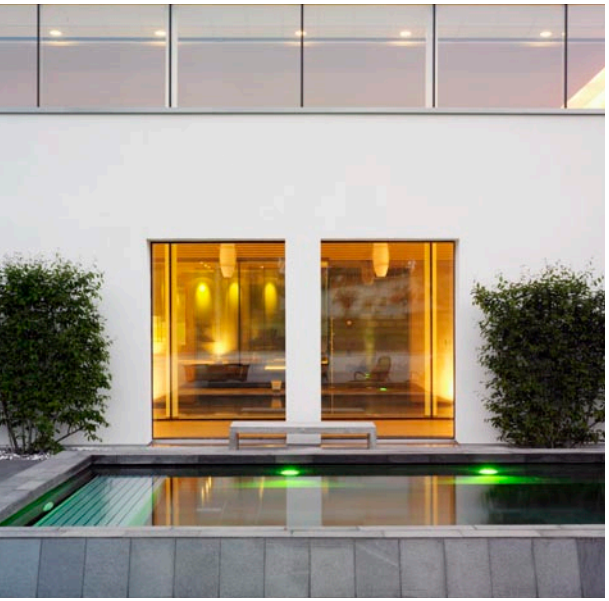
VidaSystem™

Welcome to Vida International

Vida International is a Swedish company that offers a unique patented structural glazing system for modern insulated glass façades and glass roofs. VidaSystem™ enables you to create an exclusive, hi-tech design, incorporating solutions that help you to realize your glass construction visions. To secure quality, Vida International co-operates with authorized glass façade contractors and silicone thermal pane suppliers.

We support architects and designers with technical solutions. As a consulting service, we supply drawings and material specifications for our flexible system solutions.

Please contact us to learn more about our system solutions and suppliers.

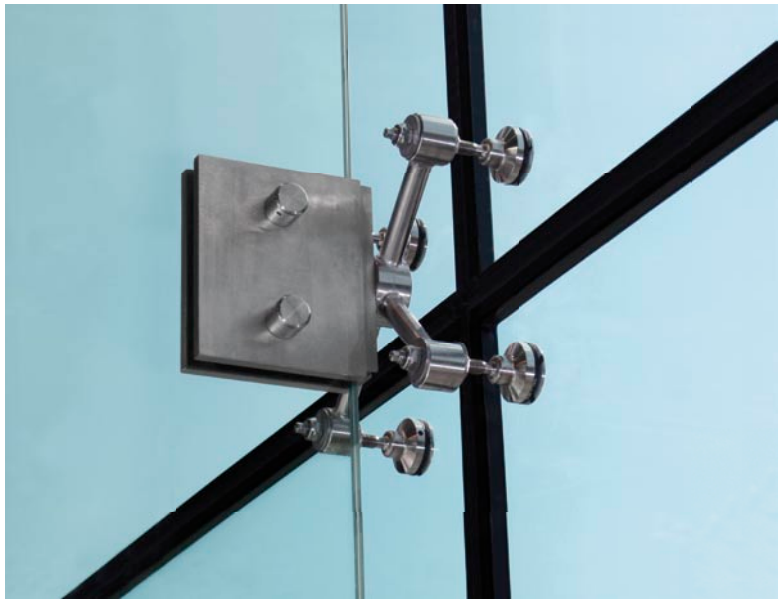


Our products

Vida International offers modern structural glazing products. Our system solutions utilise modern glazing techniques, promoting unique glass solutions. VidaSystem™ was developed by experienced glass construction designers. It ensures outstanding quality and facilitates innovative and ideal glass construction solutions.

Structural glazing is a modern glazing technique that produces a smooth plain surface. It is not only superior in transparency and appearance, but also easy to maintain. The easy planning and simple, flexible assembly of our VidaSystem™ makes this type of glazing an option for any type of glass. These are characteristics that make Vida products unique.

Thermal insulating capacity and recycling properties are two features that receive a great deal of attention when designing today's buildings. From an ecological perspective, VidaSystem™ will always enable you to choose an installation alternative from among the best the market can offer. Vida International has the expertise to offer different solutions to meet different requirements.



VidaPoint™

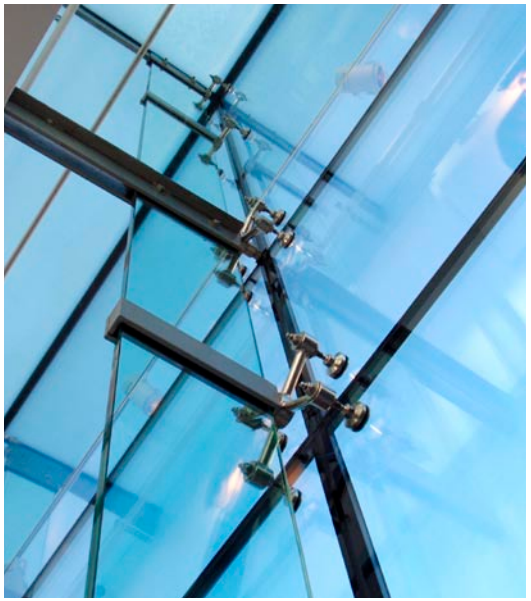
– fixing point in the inner glass

VidaPoint™ is an exclusive structural glazing system solution. The thermal pane has fixing points only in the inner glass, providing several advantages. More glass combination options are available since there is no need to drill the outer glass. The elimination of cold bridges means that VidaPoint™ has an extremely good thermal insulation capacity. And, as a design bonus, the flush and plain outer surface is easy to clean and maintain.

One distinguishing feature of VidaPoint™ is that the articulated bolts combined with the dead load supports remarkably reduce the stress of the glass.

We also utilize a warm-edge technique together with a silicon-based glazing system. Spiders in various designs are also available.

VidaPoint™ has been tested and approved for earthquakes and typhoons in line with the highest applied standards.

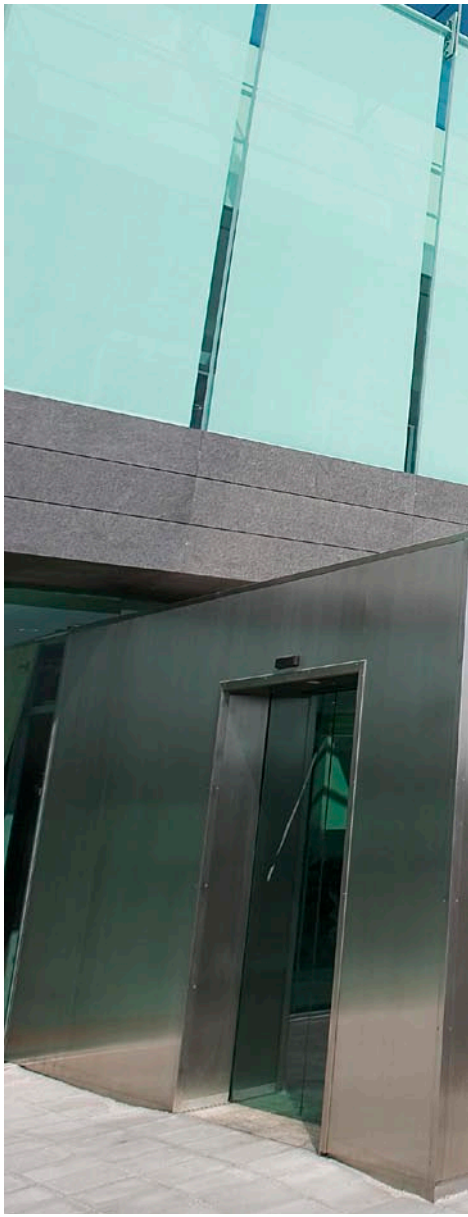


Benefit

- Handles any glass thickness over 8 mm
- Supports heavy dead load from the glass
- Earthquake and typhoon safe
- Endless glass combinations: option of solar control and Low E glass
- Can be used with triple glazing
- Easy to assemble
- Superior insulation
- Clean, aesthetic design
- Patented

Benefit

- Supports heavy dead load from the glass
- Aluminium profile measures only 10 mm
- Suitable for any silicon-sealed insulating glass. Can be used with any energy-efficient glass.
- Can be used with triple glazing
- Easy to install
- Flexible, aesthetic design possibilities
- Patented



VidaApply™

– concealed mechanical fixing

VidaApply™ is a structural glazing system solution with a concealed mechanical fixing at the thermal pane edge.

The structure provides the ultimate transparent look for a façade or a skylight due to the slim profiles. Its absence of exterior holders or plates leaves the façade surface flush and smooth. The structure accommodates a two-sided attachment, freeing the two remaining sides from either supporting mullions or transoms.This gives an impression of a framework-free façade.

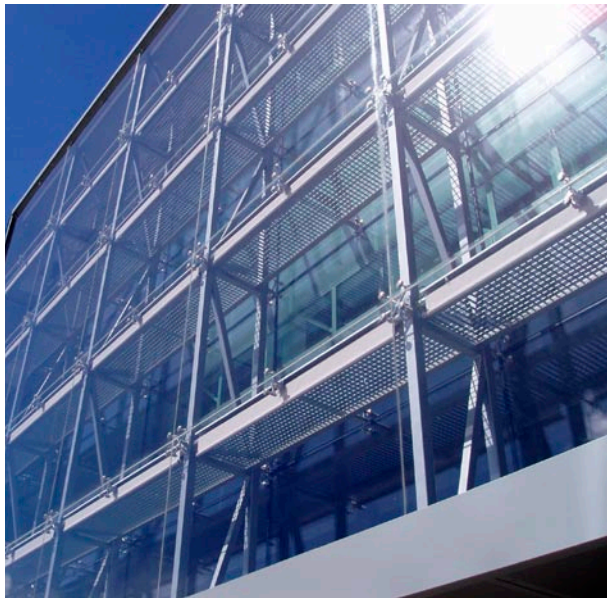
VidaApply™ is a modern solution for building façades that makes it easier to implement the most fascinating design concepts.

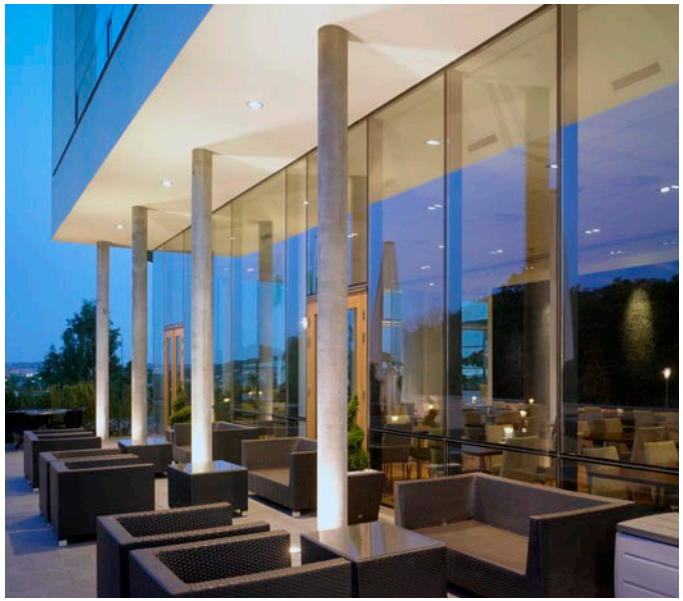
Use VidaApply™ for total design freedom.

Complementary Solutions

SinglePoint™

SinglePoint™ is developed for single glazing and has articulated joints made of stainless steel. It comes with a countersunk washer or an exterior washer. Use with our VidaPoint™ solution to create double skin façades that look the same, inside and outside. The wide range of combinations allows SinglePoint™ to accommodate an almost endless spectrum of architectural requirements.





VidaBeam™

VidaBeam™ can serve as a complement to VidaApply™. It has a self-supporting aluminium profile that is available in different lengths and styles.

VidaBeam™ is the perfect solution for self-supporting inner profiles. You can choose between vertical or horizontal interior profiles that leave two glass edges with only a silicon seal, free from mullions or transoms. Not only will this give you a more transparent look you also have the option to add vertical rods.
