

SPEED-LOCK

FLOORBALL M5 - CHAMPIONS CUP 2014 COMPETITION

Speed-Lock Floorball M5 was installed at the Zürich Saalsporthalle in just 4 hours. Special design and unique look with exclusive bi-colored panels were prepared at the Speed-Lock plant. All panels have been numbered and tested prior to installation and painting of the game lines. Speed-Lock has assured the success of that event as timing to move-in all equipment was just 10 hours in total prior to first training of the athletes.

1. one.

The tailor made bi-coloured modules were positioned directly on the concrete subfloor.

The Speed-Lock M5 patented® aluminium interlocking system between the modules guarantees a stable and durable connection and perfect eveness.

2. two..

The floorball lines are painted on the floor for a perfect fitting and adjustment of the entire playing area.

No time for game lines mesuring and taping is required.

3. three...

The surrounding wedge-shaped border is permanently joined to the modules, and therefore does not require additional fitting.

Plastic connectors assure the perfect stability and eveness of the panels.

SPEED-LOCK

FLOORBALL M5 - CHAMPIONS CUP 2014 COMPETITION

Top layer:

approx. 6,2 mm Taraflex PVC sports floor according to the current pattern range

Middle layer:

18 mm special plywood in accordance with EN 13986 - EN 636 - 2S

Interlocking:

patented® aluminium interlocking system

Bottom layer:

12 mm laminate composite foam joined to the middle layer

Length:
2470 mm

Width:
613 mm

Thickness:
approx. 36 mm

Weight per module:
approx. 28 kg

1. One.

The precise and accurate connection systems prevents slipping of the modules after installation.

2. two.

The patented® aluminium interlocking system between the modules guarantees a stable and durable connection and perfect evenness.

3. three...

The surrounding wedge-shaped border is permanently joined to the modules, and therefore does not require additional fitting.
