

parts

Please follow the instructions listed below:

1 Locate the supports at a maximum lateral distance of 14 cm, and 1 cm above the radiator. Use a pencil to mark the 4 holes for the fixing screws, and drill the wall.

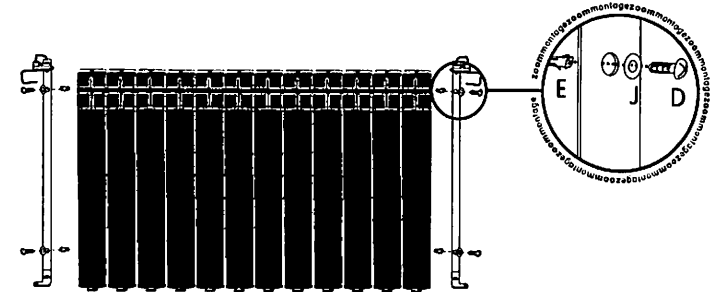

2 Before placing the support, please check that they are right side.

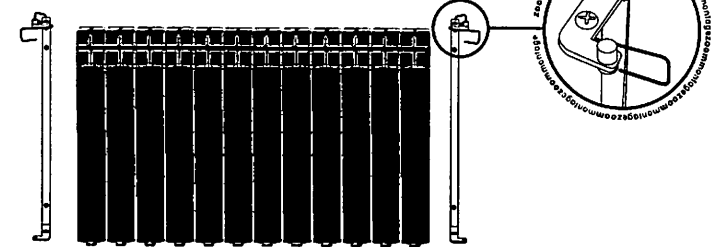

Please follow the instructions listed below:

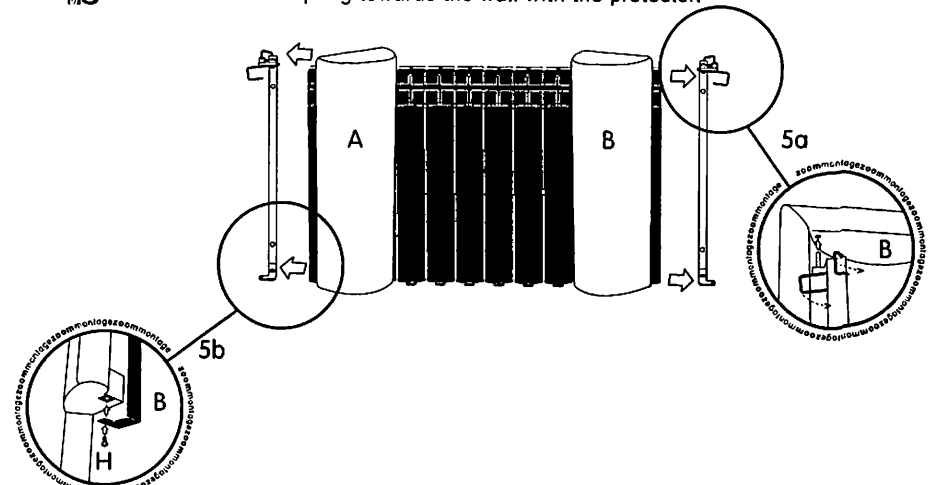

3 Once the holes have been made with a drill, make sure to locate the supports well, with the spring facing outwards, and then screw them to the wall.

4 Before installing the protectors, check that the lever is properly located (1)

5 Press the lower spring towards the wall with the protector.

► The EUROPEAN CHILD SAFETY ALLIANCE and the MINISTRY OF HEALTH AND CONSUMPTION have produced an Action Plan for Child Safety and Injury Prevention.

With regard to the regulation of water temperature, the legislation compels that pre-heated water DOES NOT EXCEED 54 degrees in ALL heating systems (in this case radiators).
